

THE EFFECTS OF CLIMATE CHANGE

By Jessica Cao & Sindy Hernandez
Period 3 & 4

CLIMATE CHANGE

Climate change refers to the rise in the average temperature of the Earth's climate system, over a long period of time.

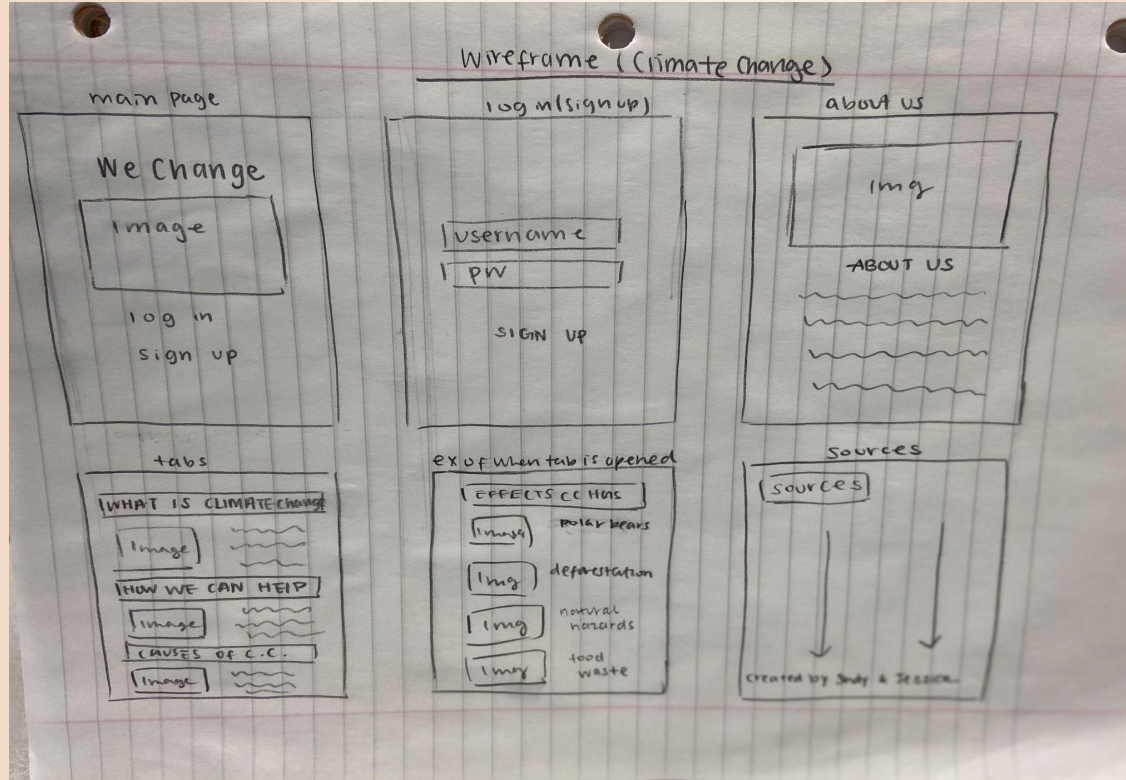

WHY CLIMATE CHANGE?

When we were figuring out what social issue we were going to choose, the most important part was finding an issue that is/would directly affect us. We ended up choosing climate change because it is an issue that affects our generation's future. It is important to stay aware of the topics that will directly impact us, and how we can help. This is why we created an app to educate people on what climate change is, how it affects us, and what we can do to help.
